

The Cheltenham School District uses an integrated pest management (IPM) approach for managing insects, rodents and weeds. Our goal is to protect every student for pesticide exposure by using an IPM approach to pest management. Our IPM approach focuses on making the school building and grounds an unfavorable habitat for these pests by removing food and water sources and eliminating their hiding and breeding places. We accomplish this through routine cleaning and maintenance. We routinely monitor the school building and grounds to detect any pests that are present. The pest monitoring team consists of our building maintenance, office, and teaching staffs and includes our students. Pest sightings are reported to our IPM coordinator who evaluates the pest problem and determines the appropriate pest management techniques to address the problem. The techniques can include increases sanitation, modifying storage practice, sealing entry points, physically removing the pests, etc.

From time to time it may be necessary to use chemicals to manage a pest problem. Chemicals will only be used when necessary and will not be routinely applied. When chemicals are used the district's pest management contractor will try to use the least toxic products when possible. Applications will be made only when non-authorized persons do not have access to the area(s) being treated. Notices will be posted in the areas 72 hours prior to application and for two days following the applications.

Parents or guardians of students enrolled in the school may request prior notification of specific pesticide applications made at the school. To receive notification, you must be placed on the school's notification registry. If you would like to be placed on the registry, contact the facilities department. This request must be made annually.

If a chemical application must be made to control an emergency pest problem, notice will be provided by email to any parent or guardian who has requested such notification. Exemptions to the notification include disinfectants and antimicrobial products; self-containerized baits placed in areas not accessible to students, and gel-type baits placed in cracks, crevices or voids.

To be placed on the list contact:
